Our network allows us to guarantee Voice Quality of service. dealerTEL offers full a suite of connectivity solutions including Private Network, Dedicated Internet Access via Fiberoptic, Ethernet or 4G wireless. Our network services were built around quality of Voice Services. All of our network services include Voice prioritization. This means that your voice quality will be perfect. dealerTEL offers a full suite of managed services for both Wireless and Wireline network access. dealerTEL, delivers end-to-end communication solutions including Managed Network Services.

## TruSAFE

### Hosted Nationwide Co-Location Data Centers

The ultimate in security with controlled environments for protection of your assets. Features include 99.999% uptime, 24/7/365 site security and monitoring. Generator backup together with N+1 power redundancy. Remote hands for anytime modifications

## TruGUARD

### 4G On Demand Failover Continuity Solution

When your primary data connection experiences an outage, your dealership is at risk of losing revenue, productivity and even customers. A wired connection is vulnerable to service disruptions such as cable cuts, downed telephone lines, severe weather, etc. With TruGuard your dealership will maintain voice connectivity during network outages. Your dealership will always have a redundant path to the internet.
